Axis announces rugged cameras designed for outdoor use on vehicles

AXIS P3905-RE is an outdoor-ready camera addition to the family of compact, rugged and discreet cameras of the AXIS P39-R Network Camera Series. They are all specially designed for onboard video surveillance in or on buses, trams, subway cars and other rugged environment vehicles.

Axis Communications, the world leader in network video, announces AXIS P3905-RE Network Camera. It is designed to be mounted on the exterior of a vehicle, increasing safety onboard and to simplify incident investigations. For example, the camera can be used for rearview surveillance alongside the vehicle outer surface, or down mounted over a door. It could also be used as a forward-facing camera.

AXIS P3905-RE has passed the demanding IP6K9K tests. It withstands tough conditions such as vibrations, shocks, bumps and temperature fluctuations as well as normal maintenance of a vehicle like washing.

AXIS P3905-RE Network Camera is specially designed for outdoor video surveillance on buses, trams, subway cars and other rugged environment vehicles.

“AXIS P39-R series is specially designed for onboard use in a variety of vehicles. It delivers high image quality in HDTV resolution, and edge storage for demanding customer requirements. The cameras also feature an active tampering alarm function for the detection of tampering attempts such as blocking or spray-painting. AXIS P3905-RE Network Camera is a natural extension in this series. It comes ready in a rugged outdoor housing and offers a cost-efficient and reliable installation. It is ideal for buses, trams, trucks and emergency vehicles” says Erik Frännlid, Director of Product Management, Axis Communications. “Axis’ Corridor Format that gives a vertical image format is naturally supported and is perfect for these kind of applications” he concludes.

AXIS P3905-RE comes with a 6 mm lens that provides a 55° horizontal field of view optimized for the typical use of surveillance alongside a vehicle. If a wider field of view is required, the housing also allows customer to change to a 3.6 mm lens offering an 87° horizontal field of view. The new outdoor housing is offered as a separate accessory to AXIS P3904-R and AXIS P3905-R that comes with the 3.6 mm lens at delivery.

All AXIS P39-R cameras are available with either a male RJ45 connector or a rugged M12 connector. The cameras provide a pixel counter for verifying that the pixel resolution of an object meets specific requirements.

The new AXIS P3905-RE and the outdoor housing AXIS T96B05 are available through Axis’ distribution channels.
