

A high-quality crisp shot with Axis network cameras.

Olivos Golf Club in Buenos Aires is equipped with HDTV cameras that monitor the comings and goings of patrons and residents around the clock.

Organization:
Olivos Golf Country Club

Location:
Buenos Aires, Argentina

Industry segment:
Commercial

Application:
Safety and security,
access control

Axis partners:
Axial Security,
Solution Box

Mission

Virtually every golfer who has made golf history in Argentina has walked the links at Olivos Golf Club, one of the nation's most established and well-known country clubs. Founded in 1928, Olivos has welcomed the world's best golfers. In order to provide proper security for all of the players as well as everyone else who enters the grounds, reliable video image capture is required 24 hours a day. Thus it was decided to upgrade to technologies capable of delivering much improved image quality.

Solution

The Club decided to switch out all video equipment used in monitoring the flow of vehicles and pedestrians to and from the facilities. In its place, ten AXIS Q1604-E Network Cameras were installed at access points, and five AXIS M1114-E models were installed around the perimeter of the country club community.

Tech distributor Solution Box, along with integrator Axial Security, both Axis partners in Argentina, were responsible for the implementation of the project.

Result

Olivos Golf Club can now maintain adequate control of the people as well as the vehicles entering and leaving the premises, thanks to the newly installed video equipment. Outstanding high-resolution images provide the information necessary to resolve any situation that may arise. As a result of IP camera technology, it is also possible to monitor the security of the facility remotely, thus increasing the level of safety even further.

“Thanks to Axis cameras that deliver better image quality as well as improved nighttime visibility, a greater sense of security has been achieved throughout the country club grounds and surrounding area.”

Iván Abrigo, Service Manager, Axial Security.

Proof of it all

Throughout a large part of its history, Olivos Golf Club has welcomed many of the world's greatest golfers participating in Argentina's major international open tournaments, and it has also played host to several world circuit tournaments.

The inability to produce images with decent resolution to adequately investigate a potential crime was why Olivos decided on AXIS Q1604-E Network Cameras with Wide Dynamic Range (WDR) that capture video in 720p HD resolution and are ideal for both day and night use. This clarity and exceptional sharpness result in achieving optimum security of the area.

“Thanks to ONVIF interoperability specifications, we integrated Axis cameras with other equipment for the optimal use of Lightfinder technology, which creates quality images under poor lighting conditions,” said Iván Abrigo, Service Manager at Axial Security. Five AXIS M1114-E Network Cameras were also installed in the access areas capturing 720p HD resolution at a maximum frame rate.

Due to the equipment's ease of operation, employees quickly got up to speed in its use. The system provides video surveillance of areas where the cameras are located. The result is an optimally secure environment at Olivos Golf Club that provides golfers and residents alike the opportunity to enjoy a safe place free from the issues often encountered nowadays in the Greater Buenos Aires area.
